## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to because of the handwritten reference numerals. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6, 8-24 and 26-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Descamps et al. '006.

The instant invention as claimed is clearly described, taught and suggested by the prior art reference in Figures 5.1 through 5.6. This is discussed in detail at column 6, lines 6-49.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1756

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 7 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Descamps et al. in combination with one of ordinary skill in the arts ability.

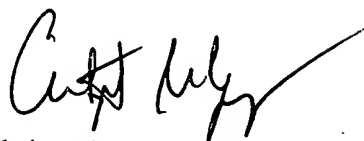

The majority of the claims are anticipated by this prior art reference as set forth above. See column 6, lines 6-49. However, the prior art does not specifically show nickel as a material for the metal film. The reference does provide a teaching for "other metals", including gold and copper. Nickel is a well-known electro-plating material, and it is one removed from Copper in the Periodic Table of Elements. One of ordinary skill in the requisite art would have found it prima facie obvious to utilize Nickel in the method of Descamps with a reasonable expectation of achieving the same or similar results as disclosed therein. This is motivated by the well known electro-plating properties of Nickel, the close proximity in the Periodic Table of Nickel to Copper, and the teaching of other metals having utility in the reference.
